EXAM VERSION: 1

EXAM: NetWare 4.1x Advanced Administration rev 1.02

PASSING SCORE: 620 **YOUR SCORE:** 650 **GRADE:** Pass

You gave wrong answers to one or more questions covering the following objectives.

- Configure the server to support diverse clients such as OS/2 and Macintosh.
- Create a structural design for an organizational, divisional, or departmental Directory tree implementation.
- Define and enable memory suballocation.
- Describe NetWare 4 memory management architecture, including memory allocation and memory protection features.
- Given a Directory tree, determine effective rights for objects and properties and troubleshoot an NDS security scenario.
- Identify additional NDS rights users may require when using specific NDS objects: Alias of a User Object, Profile login script, and Directory Map.
- Identify and describe server configuration files.
- Identify the process for designing the Directory tree, which includes determining the Directory structure, naming conventions, and implementation method.
- List the steps to enable file compression.
- Monitor and modify file and directory cache performance.
- Perform steps to assign additional object and property rights.
- Perform the steps to remove a server from the Directory tree.
