**Subject:** MARS Microsoft Server oriented Disaster recovery procedures

Everyone,

Since Disaster Recovery is ultimately a shared responsibility that rests in unequal measure upon MARS, SYSTEMS and the CUSTOMER, I am forwarding the following MARS Microsoft Server oriented Disaster recovery procedures. These procedures were forged in the fires of Patient Technologies DR and C1 imaging and are, I believe, sufficient in detail and scope to accomplish each recovery addressed. I am forwarding these procedures to each of you in order for you to be aware of what is involved in a recovery, that your experienced eyes may detect a gotcha or alternate approach to our solution set, that you have a notion of the type of assistance that MARS will need in the event of a recovery operation, and that with this awareness you will alert MARS to any changes in the Microsoft world that would have an impact upon the successfulness of these procedures. Thanks for your assistance with PT and C1 and thanks in advance for your feedback.

Louis produced most of the information contained in the following documents. The fruit of his extra effort, attention to detail and forbearance in maintaining his focus within this chaos that we know as normalcy is a testament to his ethic and deserving of thanks from us all.

Regards,  
Eric
